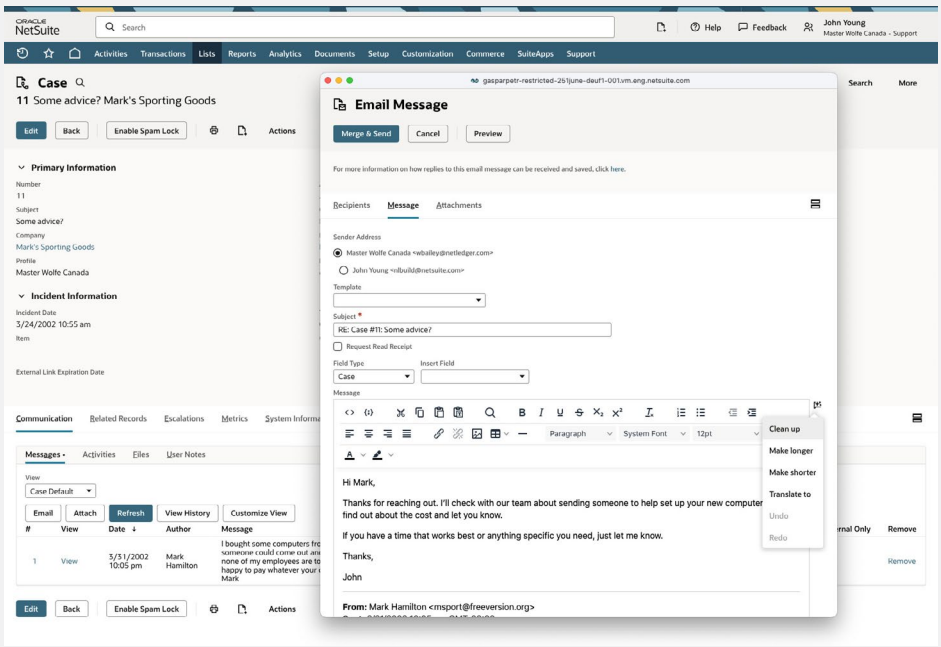
Create and Refine NetSuite Content With Generative AI

NetSuite Text Enhance

NetSuite Text Enhance uses generative AI to help populate more than 200 NetSuite text-entry fields. Create, shorten, and refine content, and quickly translate full or partial text within a field to any of 22 supported languages using Text Enhance Translate. Administrators and developers can use NetSuite Prompt Studio to refine AI-generated output by specifying format, tone, and creativity level.

Key Benefits

- **Improve Productivity.** Automatically generate or enhance text and reduce the time spent writing repetitive or detailed content.
- **Enhance Communication Quality.** Minimize grammatical errors and generate more consistent and polished communications with customers, vendors, and other stakeholders.
- **Context-Aware Suggestions.** Work within NetSuite thanks to an understanding of business context.
- **Customize Responses.** Easily configure the format, tone, and creativity level of automatically generated responses within NetSuite.



Content Creation and Refinement

When generating content, Text Enhance uses information from the page you're editing. For example, when Text Enhance generates a sales description for an inventory item, it uses information such as the item name, vendor description, display name, and stock description from the inventory item page. Text Enhance can also help you write multiple descriptions for the same item for use in specific scenarios. When you use Text Enhance to generate text for the Purchase Description field of the Purchase/Inventory subtab, as an example, the generated text can include different details and even a different tone versus what Text Enhance generates for the same item's Sales Description field of the Sales/Pricing subtab.

Translations

Easily translate any text field into 22 supported languages. Translate either the entire text field or partial text within the field. The solution uses language detection, a native feature of the OCI Language service, so you don't need to select the source language for translation—it's automatically detected.

Users only need to choose the target language to translate to. Text Enhance Translate is also available through the SuiteScript GenAI API to help users easily include translation capabilities in their NetSuite extensions and customizations.

Customize Prompts

Prompts are the input given to Text Enhance's LLM to generate or modify text. Prompt Studio lets you create and deploy prompts that customize the Text Enhance experience by replacing the default behavior of the standard actions on the Enhance Text button menu or the partial Text Enhance menu.
