

# Extend Your ERP with AI for Enhanced Planning, Reporting, and Close

Your ERP system is a foundational source of data, providing the insights executives need to understand current operations, plan for growth, and minimize risks. But processing that data into actionable, forward-looking intelligence can be challenging. By integrating an enterprise performance management (EPM) solution with your ERP data, you simplify planning and budgeting cycles, speed financial close processes, and automate reporting. And when AI is added to the mix, those insights become even richer and more on point.

## ERP + EPM: A winning combo

**Plan with precision:** Sharpen forecasts with AI-driven insights and multivariate predictive modeling.

**Close with speed.** Automate balance sheet reconciliations and intercompany eliminations with AI agents.

**Report with confidence.** Generate dynamic, AI-driven narratives and management-ready reports.

## Unlock more value with integrated NetSuite ERP and EPM

NetSuite EPM is tightly integrated with NetSuite ERP and powered by AI. Skip the disconnected tools and unify your entire financial workflow to eliminate data silos and deliver faster, more accurate insights that drive confident decisions.

**Continuous innovation with one partner.** NetSuite delivers the latest capabilities directly to you, eliminating costly, disruptive upgrades while simplifying your tech stack with a single vendor and contract.

**One system, one source of truth.** Real-time integration connects ERP and EPM data instantly. Eliminate third-party connectors, manual reconciliations, and the data integrity issues they cause.

**AI from Day 1.** Intelligent forecasting, anomaly detection, and automated narrative reporting are embedded in your EPM solution, not bolted on.

With NetSuite ERP providing source data and AI-powered NetSuite EPM, finance teams can plan smarter, close faster, and report with accuracy.
